

# Software Process

The process that deals with the technical and management issues of Software development is called **Software process**.

OR

**Software process** is the set of activities and associated results that produce a Software product.

These activities are

Subscribe to our  
**YouTube Channel**

- **Software Specification**, where Customers and engineers defines the Software that is to be produced and the Constraints on its operation.
  - **Software Development**, where the software is Designed and programmed.
  - **Software Validation**, where Software is checked to ensure that it is what the Customer requires.
- Computer Science Lectures By E.R. Deepak Garg

- **Software Evolution**, where the software is modified to reflect changing customer and market requirements.

Different types of systems need different development processes.

Eg: **Real-Time software** in an **AIRCRAFT** has to be completed specified before development begins.

OR

In **e-commerce systems**, the specification and the program are usually developed together.
